

Create a Scala application to find the GCD of two numbers.

The screenshot shows a Cloudera Quickstart terminal window with the title bar "cloudera@quickstart: ~/Downloads". The terminal displays the following Scala code and output:

```
scala>  
scala>  
scala>  
scala>  
scala>  
scala>  
scala>  
scala>  
scala>  
scala>  
scala>  
scala>  
scala> def gcd(a: Int, b: Int): Int = if (b == 0) a else gcd(b, a % b)  
gcd: (a: Int, b: Int)Int  
scala> gcd(14,21)  
res46: Int = 7  
scala>
```

The terminal window has a menu bar with "File", "Edit", and "View". The background is blue. The bottom status bar shows a "FAILED MAP attempts..." message and the Cloudera logo.
